WHAT IS FLEX MOULDING

Flex Mouldings are a flexible polyester moulding that can be cut, nailed and painted like wood. It is flexible and somewhat forgiving but must be ordered to fit and inside radius. The best example of how this works is to think of Flex Mouldings as a leather belt. If you lay a belt flat on a wall and attempt to pull the ends down to form an arch it will buckle and wrinkle. The same is true with Flex Mouldings.

All flexible polyester mouldings are temperature sensitive. At temperatures below 60 degrees the moulding will stiffen and have a tendency to become brittle. At temperatures above 110 degrees the material will soften and tear easier than normal.

Once in place, the effect of temperature changes will be minimized.

When parts are received at the job remove them from the carton and lay on a flat surface in the sun. Doing so will make the material easier to form to your needs. Polyester parts have an excellent memory and will return to the shape it was originally formed after 30 to 40 minutes if not installed.

Flex Mouldings are the only flexible moulding on the market at this time that can be nailed the same as wood without pre-drilling. At temperatures below 60 degrees pre-drilling may be necessary. When in doubt test nail a piece of scrap.

Key information Needed When Placing an Order

1. **Profile Name** - In order to insure the best possible match it is ideal if you can provide information detailing:
 - a. The company that supplied the moulding that you are trying to match
 - b. Whether it is MDF, finger joint, or clear
 - c. If it is clear the species of wood that is being matched (pine, oak, etc.)
2. **Application** - We need to know how the moulding is being used (half round, arch, elliptical, curved wall, etc.)
3. **Length of Material** - Standard mold length is 12'. Shorter lengths can be made.
4. **Any Special Order Requirements** - Examples of this would be:
 - a. Reversing the orientation of the moulding
 - b. Using casing on the ceiling as an accent for crown moulding
